CLAIMS

- 1. Method of preparing microcapsules containing at least one active ingredient comprising the application of a polymeric membrane containing at least one active ingredients and, optionally, at least one membrane additive to a core having dimensions ranging from 50 to 1200 μ m wherein said application is carried our by the process of coacervation by means of phase separation.
- Method as claimed in claim 1 comprising the following steps:
- (a) forming a solution of the coating polymer in an aqueous or in organic solvent;
- (b) suspending the cores, the particles of active ingredient and, optionally, anymembrane additive in the solution obtained in (a),
 - (c) causing coacervation of the coating polymer in the suspension obtained in (b) by means of phase separation,
 - (d) optionally, subjecting the microcapsules to a hardening treatment of the membrane.
- 15 (e) recovering the microcapsules thereby obtained.
 - 3. Method as claimed in claim 2 wherein step a) and b) are carried out as a single step.
 - 4. Method as claimed in claims 1 to 3, wherein said polymer is insoluble in water
- 20 5. Method as claimed in claim 4 wherein said polymer is ethylcellulose.
 - 6. Method as claimed in claim 4 or 5 wherein the solvent used in step a) is cyclohexane.
 - 7. Method as claimed in claim 4 to 6 wherein the additive added in step b) is selected from lactose, mannitol, polyvinylpymolidone,
- 25 hydroxypropylmethylcellulose, methylcellulose, hydroxypropylcellulose, swelling agents such as sodium carboxymethylamide, croscarmellose, crospovidone, pregelatinized starch and pH modifiers
 - 8. Method as claimed in claims 1 to 3, wherein said polymer is soluble in water.
- Method as claimed in claim 8 wherein said polymer is selected from the group
 consisting of getatine, cellulose acetate phthalate, hydroxypropylmethylcellulose phthalate or derivates thereof.

- 10. Method as claimed in claim 8 or 9, wherein the solvent used in step a) is water at a pH comprised between 1 and 9.
- 11. Method as claimed in claim 10, wherein the pH is comprised between 4 and 7.
- 12. Method as claimed in claims 8 to 11, wherein the additive added in step b) is selected from dibasic calcium phosphate, calcium sulphate, barium sulphate, calcium carbonate, magnesium carbonate and silicates.
- 13. Method as claimed in claims 4 to 7, wherein in step c) phase separation takes place by variation in temperature.
- 14. Method as claimed in claim 8 to 12, wherein in step c) phase separation takes
 place by pH variation, variation in temperature or insolubilisation of the polymer by adding phase-separation inducing agents.
- 15. Microcapsules comprising a core having dimension ranging from 50 to 1200 µm and a coating consisting of a polymeric membrane containing at least one active ingredient dispersed therein in the form of solid particles, wherein the polymer constituting the membrane is a water-soluble polymer and the particles of active ingredient are dispersed inside said polymeric membrane with a concentration that decreases progressively moving from the core towards the distal part of the membrane.
- Microcapsules as claimed in claim 15 wherein the taste of the active
 principle is masked.
 - Microcapsules as claimed in claims 15 or 16 characterised by a modified release of the active principle.
 - Microcapsules as claimed in claim 17 wherein said modified release is a delayed release.
- 25 19. Microcapsules as claimed in claims 15 to 18, wherein the water-soluble polymer is chosen from gelatine, cellulose acetate phthalate, hydroxypropylmethylcellulose phthalate and derivates thereof.
 - Microcapsule as claimed in claims 15 to 19, wherein said polymeric membrane further contains water-insoluble membrane additives.
- 30 21. Microcapsules constituted by a core having dimension ranging from 50 to 1200 µm and coated with a polymeric membrane comprising one or more active

15

ingredients homogeneously dispersed thereof in the form of solid particles, characterised in that the polymer constituting the membrane is a water-insoluble polymer.

- 22. Microcapsules as claimed in claims 21 characterised by a modified release of the active ingredient.
- 23. Microcapsules as claimed in claims 21 or 22, wherein the water-insoluble polymer is selected from ethylcellulose and its derivates.
- 24. Microcapsules as claimed in claims 21 to 23, wherein the polymeric membrane further contains water-soluble additives.
- 10 25. Microcapsules as claimed in claims 15 to 24, wherein the active ingredient has dimensions ranging from 0.1 to 80 μ m, and ranges from 0.1 to 40% by weight of the microcapsules.
 - 26. Microcapsules as claimed in claim 25, wherein the active ingredient has dimensions ranging from 1 to 30 μ m, and ranges from 0.2 to 21% by weight of the microcapsules.
 - 27. Microcapsules as claimed in claims 15 to 26, wherein the core constitutes 50 to 95% by weight of the microcapsules and the coating polymer varies from 2 to 20% by weight of the microcapsule.
- 28. Microcapsules as claimed in claims 15 to 27, wherein the membrane contains
 additives having a mean diameter ranging from 0.1 to 80 µm and constituting from
 2 to 10% by weight of the microcapsule.
 - 29. Microcapsules as claimed in claim 28, wherein the membrane additives have a mean diameter ranging from 7 to 30 μm and constitute from 3 to 5% by weight of the microcapsule.
- 30. Microcapsules as claimed in claims 15 to 29 coated with a further coating layer.
